

**CLAIM:**

1. A method of matching orders for a user according to an evaluation heuristic, comprising:

5

- a) selecting an evaluation heuristic;
- b) scheduling a time to execute the selected evaluation heuristic;
- c) executing the selected evaluation heuristic;
- d) creating an order message for communication to a transaction destination if the selected evaluation heuristic matches the order; and
- e) repeating steps a) through d) until the order is fulfilled.

10

15

2. An order matching system for matching orders by a user by computer according to an evaluation heuristic, comprising:

- a) a user interface for selecting the evaluation heuristic;
- b) a user interface for scheduling execution of the selected evaluation heuristic;
- c) a computer program for executing the selected evaluation heuristic at the scheduled time; and
- d) a communications network coupled to the computer program for creating an order message to be dispatched to a transaction destination if the selected evaluation heuristic matches the order.

20

25

3. An order schedule for use in an order matching system that creates an order message for communication to a transaction destination upon matching an order to evaluation heuristics selected by a user, the order schedule comprising:

30

09770108-012501

- a) a user interface that allows for the selecting of the evaluation heuristic; and
- b) a user interface for creating a schedule to execute the evaluation heuristic.
